Why I need to recover my account when sign in?

After you created your account/main wallet, you should be able to log in your account instead of recover. There might be 3 kinds of reasons when you see the page as below.

As CoNET is developed based on the PWA (Progressive Web App) framework. It provides app-like experience through a web browser on the devices you use. Users don't need to download APP from Apple store or google play, and no need to upgrade APP from time to time, so you could have better user experience.

Reason 1: You are using a differ browser in your devices.

As the platform is browser based, if you change to another browser or another device, which is different to the one you used, then you have to recover your wallet with the 12 recover phrases. **Reason 2:** The browser data clear setting of your devices.

If your browsing data had been cleared, then the wallet address stored in browser cache would be removed, you have to recover your wallet when you log in next time.

Solution: Please don't clear cache lest recover required.

Reason 3: You are using Private browser.

Private browser you are using are not allowed to save the data from browser, so the wallet data could not be found in cache.

Solution: Please don't use Private browser to create/log in your wallet.

How can I get my Public & Private Key?

1. Click "Anonymous User" at the left bottom of the homepage

2. Public Key of your wallet is showed under the icon of your wallet. You can copy the public
